## **Introduction to Deep Learning**

LATEST SUBMISSION GRADE 95%

What d	does the analogy "AI is the new electricity" refer to?	1/1 point
O Th	arough the "smart grid", Al is delivering a new wave of electricity.	
Sir	milar to electricity starting about 100 years ago, Al is transforming multiple industries.	
O AI	is powering personal devices in our homes and offices, similar to electricity.	
O AI	runs on computers and is thus powered by electricity, but it is letting computers do things not possible before.	
~	Correct Yes. Al is transforming many fields from the car industry to agriculture to supply-chain	
Which	of these are reasons for Deep Learning recently taking off? (Check the three options that apply.)	1/1 point
_	eep learning has resulted in significant improvements in important applications such as online advertising, speech cognition, and image recognition.	
<b>✓</b>	Correct These were all examples discussed in lecture 3.	
✓ W	e have access to a lot more computational power.	
~	Correct Yes! The development of hardware, perhaps especially GPU computing, has significantly improved deep learning algorithms' performance.	
□ N∈	eural Networks are a brand new field.	
<b>✓</b> We	e have access to a lot more data.	
~	Correct Yes! The digitalization of our society has played a huge role in this.	

3. Recall this diagram of iterating over different ML ideas. Which of the statements below are true? (Check all that apply.)

0.75 / 1 point

## Experiment

## Code

☐ It is faster to train on a big dataset than a small dataset.

Faster computation can help speed up how long a team takes to iterate to a good idea.

Yes, as discussed in Lecture 4.

- Recent progress in deep learning algorithms has allowed us to train good models faster (even without changing the CPU/GPU hardware).
- Being able to try out ideas quickly allows deep learning engineers to iterate more quickly.

Yes, as discussed in Lecture 4.

You didn't select all the correct answers

4. When an experienced deep learning engineer works on a new problem, they can usually use insight from previous problems to train a good model on the first try, without needing to iterate multiple times through different models. True/False?

1/1 point

- O True
- False
  - ✓ Correct

Yes. Finding the characteristics of a model is key to have good performance. Although experience can help, it requires multiple iterations to build a good model.

5. Which one of these plots represents a ReLU activation function?

1 / 1 point

O Figure 2:

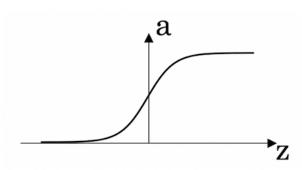

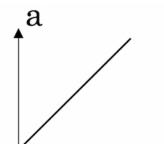

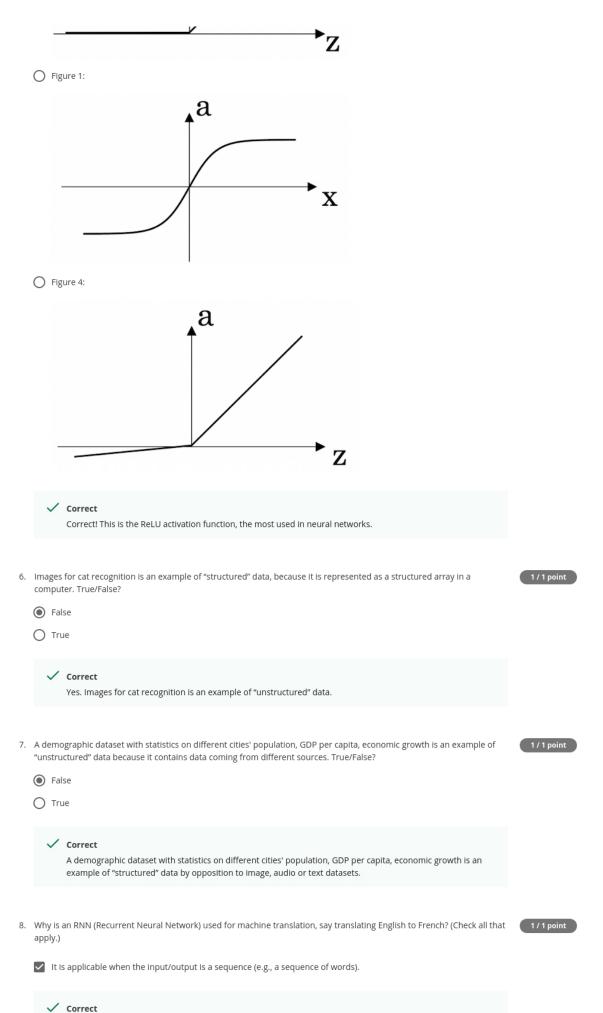

Figure 3:

Yes. An RNN can map from a sequence of english words to a sequence of french words.
