Strided convolutions *CORRECTION*

At 4:44 when Andrew was explaining the technical note on cross-correlation vs convolution, the flipping of the filter was incorrect.

Originally, it was:

3	4	5
1	0	2
-1	9	7

The correct filter after flipping vertically and horizontally would be:

7	9	-1
2	0	1
5	4	3

What Andrew did was more a flip over the diagonal.
